

# OUR ENERGY OBJECTIVE

## OUR MISSION

By focusing on isocyanates production, BorsodChem Zrt. intends to become Europe's leading chemical company with the efficient utilisation of available energy resources.

## OUR PHYLOSOPHY

Continuously increasing the efficiency of our energy consumption guarantees the responsible management with natural resources.

## OUR ENERGY OBJECTIVES

We defined our energy objectives to be achieved between the period of 2019 and 2021 as follows:

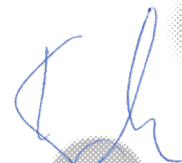

1. Efficiently operate and develop the Energy Management System according to regulations of the ISO 50001 Standard.
2. Develop the methodology of energy review in order for us to see our energy consumption as detailed as possible and to be able to take actions to improve our energy efficiency.
3. Increase energy efficiency by developing, renewing and optimising our technological processes and equipment.
4. Inspect the possibility of energy saving solutions in terms of all our activities.
5. Reduce electricity, steam and natural gas consumption by the introduction of more efficient technological solutions.
6. Reducing cooling and heating energy by increasing efficiency - reaching a wider range of uses - extracting heat generated by technological processes.
7. Enhance energy efficiency by increasingly improving the capacity utilisation of our plants.
8. Keep our equipment in a technical status by means of preventive maintenance, which results in optimal energy consumption in the course of their operation.
9. Reduce energy consumption per unit of product by eliminating energy losses.
10. Disclose and reduce the energy loss of our process, production and service facilities.
11. Develop the energy conscious thinking of our employees by trainings and the operation of incentive scheme.
12. Comply with energy laws at all times and other voluntary requirements.
13. Select equipment in our procurements with the possibly lowest energy consumption.

Towards the achievement of our objectives we execute EnMS programs in accordance with the Business Plan.

Our object is achieve to save that at least 150,000 MWh of energy by implementing programs. With our continuous development and optimized processes, we want to achieve at least 4% energy efficiency improvement at the Company level.
